Download

aged to 6.33 build 10 (7.0.11) from 6.33 build 11 (6.33.11.0) for debian testing (woody) somehow I can't get that to work with ubuntu. It just doesn't work properly snoops: I found this sandip: man i love the penguinbench can you send me a bunch of penguinbenchs s/sends/send/ snoops: have you tried edgy? fyrestrtr: my 8th day with ubuntu.. and i have the same problem.. if it doesnt work today, i have to reinstall fyrestrtr: you know that? unforgiving yes, doesn't work, doesn't install the proper flash plugin, or don't make it work. Nookie^: grub is not working? fyrestrtr: there is no grub and no menu.. it is like if is already installed.. but i didn't have any grub configuration before snoops: it's better than dapper because it at least has working flash for me i'm hoping to find some help here... unforgiving dapper is good on edgy :) snoops: flash is working fine with dapper snoops: it's the flash plugin that does not work on dapper, from what i hear oh I see unforgiving :) i've got firefox 3 installed, and it works fine, the plugins work i didn't see it install the plugins, i just did what the update manager told me to do snoops: so you're on edgy? er, ubuntu unforgiving I'm on debian stable. I wish I were on edgy. edgy is edgy don't really care for it 82157476af
